

AME 294 · PORTFOLIO GAME 2

Prismcoil.

Chase the glow. A vibe-coded snake survival game built with AI.

Play it: feinmankate1-jpg.github.io/Slither

What I made

Colorful snake survival game for desktop and mobile browsers. Steer toward glowing sparks, grow your coil, and outlast twelve AI rivals in a large circular arena.

Inspired by Slither.io's core idea only. Name, look, code, and graphics are original.

How it plays

Captured from the running game

Steer

Move the mouse or drag a finger to steer.

Boost

Hold click or Space for a speed surge. Release to recharge.

Survive

Eat sparks to grow. Hit a rival's body or the rim and it's over.

Reward · Damage · End

REWARD

Eat a glowing spark

+10 points (+25 for a fallen rival's remains), a longer coil, and a reward sound.

`assets/audio/reward.mp3`

DAMAGE

Hit a rival's body

You're eliminated at once, with a screen shake and a damage sound. The rim is deadly too.

`assets/audio/damage.mp3`

END

Game Over card

Final score, personal best, and a Restart button. The end sound plays as it appears.

`assets/audio/end.mp3`

The prompt behind it

FROM PROMPT 2 (EXCERPT)

REWARD: *Eating glowing food/orbs gives the player points, increases their length, and plays a reward sound.*

DAMAGE: *Colliding head-first with another snake's body triggers a collision/death sound and immediately eliminates the player.*

END: *The game ends when the player dies. Show a clear Game Over screen with the player's final score and an option to restart.*

Toolchain

CODE AGENT

OpenAI Codex

Wrote the game, fixed the preview, deployed it, and drafted the docs.

MUSIC

ElevenLabs

Generated the background music track that loops during a round.

HOSTING

GitHub Pages + Itch.io

Static site with no build step. Zip is ready for an Itch.io HTML upload.

Debugging log

INCIDENT 1

Preview said “blocked”

Symptom “This content is blocked. Contact the site owner to fix the issue.”

Fix prompt “Check why the preview isn't working, fix any errors, and help me run and play the game.”

Result Moved to a GitHub Pages deployment, where the game loads.

INCIDENT 2

Empty GitHub repo

Symptom The repository was empty, so the game only existed in the cloud workspace.

Fix prompt “Push all the game files you created to my GitHub repository and help me deploy it.”

Result Files pushed, Pages enabled in Settings, relative paths keep it working.

Designed in: audio unlocks only after a click or Space, so autoplay rules never block sound.

Audio design

background.mp3

ElevenLabs music, loops at 25% volume

reward.mp3

damage.mp3

end.mp3

Sound effect length (seconds)

Human + AI teamwork

Where AI sped me up

One detailed prompt produced a playable game: AI rivals, boost, particles, Game Over, and a high score.

Where I steered

I wrote the design brief, kept it original, set music to 25% volume, and said not to touch gameplay.

Where it got bumpy

Preview and deployment took back-and-forth

The AI wrote the code fast. The game feel came from the brief.
